3661

DATE MAILED: 04/18/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)	
	10/777,140	FABRY ET AL.	
	Examiner	Art Unit	
	CUONG H. NGUYEN	3661	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 09 December 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-17 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-17 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This Office Action is the answer to the Remark received on 12/09/2005.

The pending claims are 1-17.

Drawings

2. Three sheets of 3 formal drawings (received on 2/13/2004) are acceptable for examining purposes.

Response

3. The examiner maintains the previous ground of rejections (Office Action 9/09/2005) because what the applicant claims (see pending claims 1-17) were suggested by prior art as cited. Applicants' arguments are unpersuasive; e.g., on page 3, 3rd para., applicants argue that "a transmission being driveably engaged with [a] power source.", this claimed limitation is very fundamental in automotive field (a power source MUST use a form of energy/(a fuel supply) to work – this is a very fundamental issue), and is inherent in cited reference (not limit to Koga et al.'s patent wherein a transmission is directly or indirectly drive-ably engaged with a power source – according to Koga's Figs.1 this limitation is already suggested – the applicants assert that broad interpretation of the examiner is "misinterpretation" on page 5, 2nd para.).

On page 2, 1st para. of part I, applicants argue that cited references "fail to disclose or suggest all of the subject matter recited in independent claim 1 (or independent claims 2/3 – see page 5, para. 4)"; the examiner respectfully asks that how many subject matter(s) there are in claim 1/2/3? The claimed concept is merely modify a fuel consumption/curve based on a load condition/a vehicle speed (there are more than one unknown/disclosed value(s) that make(s) this

Serial Number: 10/777,140
Art Unit: 3661

claim indefinite (a fuel supply limit, a desired speed since there must be no assumption in a claim – in other words, a claim must be defined).

In page 3, 4th para. the applicants argue “In addition to not disclosing a transmission...”, the cited reference is about a vehicle, according to that argument, is there no transmission involved in cited vehicle? The examiner considers that these kinds of arguments are basic.

In para. 1 of page 4, the applicants argue “independent claim 1 is not prima facie obvious based on Koga et al. and/or Fiaschetti et al.”, the examiner respectfully submits that what is the definition of applicants about “prima facie obviousness” because cited art already suggest what the applicants claim. Applicants try to distinguish details of the disclosed specification with prior art while not trying to amend the pending claim; the examiner is unpersuasive.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. §103(a), which forms the basis for all obviousness rejections set forth in this Office Action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patent ability shall not be negated by the manner in which the invention was made.

4. Claims 1, 4, and 8 are rejected under 35 U.S.C. §103(a) as being unpatentable over Koga et al. (US Pat. 5,670,830), in view of Flaschetti et al. (US Pat. 5,901,684).

A. Per claim 1: Koga et al. teach a power management system for a machine, comprising:

- a power source configured to receive a fuel supply (see Koga et al., Fig.1 refs. 13, 9);
- a transmission being driveably engaged with the power source (see Koga et al., Fig.1 refs. 9, 4, 2); and

- a control system “in communication” with the power source and the transmission (see Koga et al., Fig.1 refs. 13, 9), the control system being configured to determine a fuel supply limit associated with a desired speed of the power source (see Koga et al., Fig.2), the fuel supply limit being determined (see Koga et al., claim 1).

- Koga et al. do not expressly disclose that the fuel supply limit is determined from a fuel curve associated with the machine.

- However the examiner respectfully submits that this was a desirability of every car’s designer – to perfect the engine’s performance according to a predetermined curve), wherein the control system is operative to modify at least a portion of the fuel curve based on a load condition of the power source (see Koga et al., Fig.3).

- Koga et al. do not disclose a proportional between motor torque and a vehicle’s load.

However, as plain definition with one of ordinary skill in the art, a motor torque represents a generated rotating force output power/load of a vehicle (i.e., *Equation:* $T = FR$

Where: T = Torque, lb-ft

F = Force, lb

R = Radius, or distance which force is applied from pivot location, ft).

- Koga et al. do not disclose a capability of modifying a fuel supply of a vehicle.

However, Flaschetti et al. suggest about modifying a fuel supply source by controlling a Fuel Injector 124 (see Flaschetti et al., Fig.4).

It would have been obvious with one of ordinary skill in the art at the time of invention was made to combine Koga et al., and Flaschetti et al. to disclose about modifying a fuel supply of a vehicle for the advantage of reducing fuel injection as a function of the learned combustion stability value, reducing hydrocarbon emissions while maintaining good drive-ability and performance of the vehicle.

B. Per claim 4: Koga et al. inherently teach a power management system for a machine, comprising a drive train operably coupled to a transmission (DRIVE MANAGEMENT CONTROLLER 9 is coupled to transmitting output power to wheels 3A and 3B, see Koga et al., Fig.1).

C. Per claim 8: Koga et al. also teach a power management system for a machine, comprising a DRIVE MANAGEMENT CONTROLLER 9 to modify the fuel curve based on the load condition of the power source (LIMITED curves) and a power source speed (see Koga et al., Figs. 2-3).

5. Claim 5 is rejected under 35 U.S.C. §103(a) as being unpatentable over Koga et al. (US Pat. 5,670,830), in view of Flaschetti et al. (US Pat. 5,901,684), and in view of Manring (PGPUB US 20020133279 A1).

The rationales and references for a rejection of claim 9 are incorporated.

Koga et al. and, Flaschetti et al. do not disclose about a drive train is configured to drive tracks of an earth-working machine.

However, Manring teaches that idea (see Manring, paragraphs {008, 0013, 0015, and 0021}).

It would have been obvious with one of ordinary skill in the art at the time of invention to combine Koga et al., Manring, and Flaschetti et al. to disclose about modifying a fuel supply of a vehicle for the advantage of control-ability of adjusting the amount of fuel being injected into an engine's cylinders wherein that engine may be an earth-working machine.

6. **Claims 2-3, 9, 13, 15, and 17 are rejected under 35 U.S.C. §103(a) as being unpatentable over Koga et al. (US Pat. 5,670,830), in view of Flaschetti et al. (US Pat. 5,901,684), and in view of Rini et al. (US Pat. 5,121,324).**

A. Per claims 2-3: The rationales and references of claim 1 are incorporated.

Claims 2-3 cover all limitations of claim 1, except:

- the fuel supply limit being regulated based on rack position and a load condition of the power source.
- Rini et al. teach about using a rack position (FUEL RACK POSITION SENSOR 2007) and a load condition (ENGINE SPEED SENSOR 2005) to determine a signal for controlling FUEL SHUT-OFF (2010).
- It would have been obvious with one of ordinary skill in the art at the time of invention to combine Koga et al., Flaschetti et al., and Rini et al. to suggest that fuel supply limit being regulated based on rack position and a load condition of the power source for the advantage of applying optimum working condition to a vehicle (e.g., raising to a higher efficiency level).

B. Per claim 9: Koga et al. inherently teach a power management system for a machine, comprising a drive train operably coupled to a transmission (DRIVE MANAGEMENT CONTROLLER 9 is coupled to transmitting output power to wheels 3A and 3B, see Koga et al., Fig.1).

C. Per claims 13, and 17: The rationales and references for a rejection of claim 2 are incorporated.

Fiaschetti et al. also teach an emissions sensor to sense an amount of emissions leaving the power source, and to modify the fuel curve based on the sensed amount of emissions (see Fiaschetti et al., col.1, lines 33-38, and col. 2 lines 58-61).

D. Per claim 15: The rationales and references for a rejection of claim 3 are incorporated.

Fiaschetti et al. also teach about modifying the fuel supply limit includes determining a percent of correction to fuel (116) for modifying the fuel supply (124) (see Fiaschetti et al., Fig.4 and col.5, lines 28-67).

7. Claim 10 is rejected under 35 U.S.C. §103(a) as being unpatentable over Koga et al. (US Pat. 5,670,830), in view of Flaschetti et al. (US Pat. 5,901,684), in view of Rini et al. (US Pat. 5,121,324), further in view of Manring (PGPUB US 20020133279 A1).

The rationales and references for a rejection of claim 9 are incorporated.

Koga et al. and, Flaschetti et al. do not disclose about a drive train is configured to drive tracks of an earth-working machine.

However, Manring teaches that idea (see Manring, paragraphs {008, 0013, 0015, and 0021}).

It would have been obvious with one of ordinary skill in the art at the time of invention to combine Koga et al., Manring, Rini et al., and Flaschetti et al. to disclose about modifying a fuel supply of a vehicle for the advantage of control-ability of adjusting the amount of fuel being injected into an engine's cylinders wherein that engine may be an earth-working machine.

8. Claims 6-7 are rejected under 35 U.S.C. §103(a) as being unpatentable over Koga et al. (US Pat. 5,670,830), in view of Flaschetti et al. (US Pat. 5,901,684), and in view of Schimmel et al. (US Pat. 4,885,690).

The rationales and references for a rejection of claim 1 are incorporated.

Koga et al. and Flaschetti et al. do not disclose about sensing a power source load and transmission operating gear, and wherein the control system is configured to determine whether the transmission operating gear is within a predetermined slip-limited range of the transmission.

However, Schimmel et al. et al. suggest about sensing vehicle's transmission system, and power source using sensing means (see Schimmel et al., claim 1).

It would have been obvious with one of ordinary skill in the art at the time of invention to combine Koga et al., Schimmel et al., and Flaschetti et al. to disclose about sensing a power source load and transmission operating gear in Koga et al.'s DRIVE MANAGEMENT CONTROLLER 9 where that control system would determine by comparing a transmission range against a predetermined range of optimum standards for an advantage of modifying to a better vehicle's working condition.

9. Claims 11-12, 14, and 16 are rejected under 35 U.S.C. §103(a) as being unpatentable over Koga et al. (US Pat. 5,670,830), in view of Flaschetti et al. (US Pat. 5,901,684), in view of Rini et al. (US Pat. 5,121,324), and in view of Schimmel et al. (US Pat. 4,885,690).

A. Per claims 11-12, and 16: The rationales and references for a rejection of claim 2 are incorporated.

Koga et al. and Flaschetti et al. do not disclose about sensing a power source load and transmission operating gear, and wherein the control system is configured to determine whether the transmission operating gear is within a predetermined slip-limited range of the transmission.

However, Schimmel et al. et al. suggest about sensing vehicle's transmission system, and power source using sensing means (see Schimmel et al., claim 1).

Serial Number: 10/777,140
Art Unit: 3661

It would have been obvious with one of ordinary skill in the art at the time of invention to combine Koga et al., Schimmel et al., Rini et al., and Flaschetti et al. to disclose about sensing a power source load and transmission operating gear in Koga et al.'s DRIVE MANAGEMENT CONTROLLER 9 where that control system would determine by comparing a transmission range against a predetermined range of optimum standards for an advantage of modifying to a better vehicle's working condition.

B. Per claim 14: The rationales and references for a rejection of claim 3 are incorporated.

The examiner respectfully submits that it covers limitations of above-analyzed claims 6, and 7. Therefore, an obviousness rejection is also applied with the same rationales and references set forth.

Conclusion

10. Claims 1-17 are not patentable. **THIS ACTION IS MADE FINAL.** See MPEP § 706.07(a). Applicants are reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
